

ADVANCED INTERVENTIONAL IMAGING SYSTEM INSTALLED

30 November 2015

Medipass Healthcare recently installed an advanced interventional imaging system as part of its long-running MES at its Leeds Cancer Centre.

Ms Gill Roe, Advanced Radiographer Practitioner with the Leeds Teaching Hospitals Trust, said, “The installation of the new Artis Zee has allowed us to streamline our staff training for both the radiographers and radiologists as we now have three of these image intensifiers in our adult fluoroscopy radiology service in LTHT. The increased functionality of the new room has given us scope to expand our service and improve access for patients.”

The Siemens Artis Zee was selected as part of an in-depth procurement process conducted by Medipass in close consultation with the Trust’s clinical team and was selected because of its wide range of configurations and cutting-edge 3D applications.
